The Claims

1.   (Original) A method for defining a composite web page, comprising:

identifying a web page;

analyzing the web page to determine a list of the associated elements;

presenting the list to a user;

receiving a user selection of one or more associated elements from the list; and

registering the user selection.

2.   (Original) The method of claim 1, wherein registering includes storing the user selection in a local registry.

3.   (Original) The method of claim 1, wherein registering includes transmitting the user selection to a remote server for storage.

4.   (Original) The method of claim 1, further comprising creating a specification, the specification including data defining how to fetch at least one web page associated with the selected elements and how to extract the selected elements.

5.   (Original) The method of claim 1, wherein identifying the web page includes identifying a plurality of web pages; and wherein the list includes elements associated with each of the plurality of web pages.

6.   (Original) The method of 5, further including defining segments of the list according to each of the plurality of web pages.

7.   (Original) The method of claim 6 where presenting includes presenting each of the segments of the list at separate times.

8.   (Original) The method of claim 1, further comprising determining an identifier associated with the user and wherein registering includes storing the identifier.

9.   (Previously Presented) A method for presenting a composite web page, comprising:

receiving a user request to present a composite web page, the composite web page defined by analyzing a web page to determine a list of the associated elements, presenting the list to a user, and receiving a user selection of one or more associated elements from the list;

identifying at least one element of the composite web page;

retrieving the at least one element; and

rendering the at least one element to form the composite web page.

10.   (Original) The method of claim 9, wherein identifying includes accessing a registry.

11.   (Original) The method of claim 10, wherein identifying includes:

determining an identifier associated with the user; and

accessing the registry is based on the identifier.

12.   (Original) The method of claim 9, wherein retrieving includes:

retrieving a web page associated with an element; and

extracting the element from the associated web page.

13.   (Original) The method of claim 9, wherein identifying includes:

accessing a registry, the registry including data defining the position of each element; and

wherein rendering includes displaying each element according to the data.

14.   (Original) A system for defining a composite web page, comprising:

a processor;

a memory coupled to the processor storing processor executable instructions to control the operation of the processor;

the processor executable instructions including:

instructions to identify a web page, the web page referencing at least one associated element;

instructions to analyze the web page to determine a list of the associated elements;

instructions to present the list to a user;

instructions to receive a user selection of one or more associated elements from the list, the selected elements for display on a composite web page; and

instructions to register the user selection.

15.   (Previously Presented) A system for presenting a composite web page, comprising:

a processor;

a memory coupled to the processor storing processor executable instructions to control the operation of the processor;

the processor executable instructions including:

instructions to receive a user request to present a composite web page, the composite web page defined by analyzing a web page to determine a list of the associated elements, presenting the list to a user, and receiving a user selection of one or more associated elements from the list;

instructions to identify at least one element of the composite web page;

instructions to retrieve the at least one element; and

instructions to render the at least one element to form the composite web page.

16.   (Original) A computer-readable storage medium encoded with processing instructions for defining a composite web page, including:

computer readable instructions for identifying a web page;

computer readable instructions for analyzing the web page to determine a list of the associated elements;

computer readable instructions for presenting the list to a user;

computer readable instructions for receiving a user selection of one or more associated elements from the list; and

computer readable instructions for registering the user selection.

17.   (Previously Presented) A computer-readable storage medium encoded with processing instructions for presenting a composite web page, including:

computer readable instructions for receiving a user request to present a composite web page, the composite web page defined by analyzing a web page to determine a list of the associated elements, presenting the list to a user, and receiving a user selection of one or more associated elements from the list;

computer readable instructions for identifying at least one element of the composite web page;

computer readable instructions for retrieving the at least one element; and

computer readable instructions for rendering the at least one element to form the composite web page.

18.   (Previously Presented) The method of claim 1, wherein analyzing the web page includes parsing HTML source code of the web page.

19.   (Previously Presented) The method of claim 1, wherein presenting the list to the user includes providing a view of the relationships between the associated elements in the form of a tree structure.

20.   (Previously Presented) The method of claim 9, wherein analyzing the web page includes parsing HTML source code of the web page.
